**Project Title:** Ophthalmic Dose Compliance Monitor  
**Team Members:** Arinne Lyman, Anita Zarebi, Becky Koszalinski, Michael Alexander  
**Client:** Christopher J. Murphy DVM, PhD  
**Advisor:** Wally Block  
**Date:** 9-14-05 to 9-20-05

**Problem Statement:**
Develop a dose compliance monitor that would record (unknown to the client) when (date and time) a topical ophthalmic medication was delivered. There are several older studies performed in the 80's that used a compliance monitor specifically designed for topical ophthalmic medications, and I am hopeful that we would be able to develop a cost effective improved model. Ideally we would be able to manufacture approximately 10 of these devices for use in studies. It could be as simple as some of the older models that recorded when the top of the bottle was removed and the bottle inverted. Maintenance of sterility of the medication is imperative. The simplest designs would simply provide a thin sleeve that the commercial 5, 15, or 30 ml topical ophthalmic medication bottle slid into. There are many possibilities and I am hopeful that some of your students would find this challenging. These would initially be used in research of patient compliance.

**Statement of Team Goals:**
1. Problem statement  
2. Create first draft of PDS  
3. Set up meeting with client  
4. Begin to research and develop design ideas  
5. Research specs on parts as well as cost and dimensions  
6. Continue the design project.  
   a) Research all possible background information.  
   b) Research existing solutions on the market  
   c) Brainstorm in individual teams  
   d) Meet with experts to gain ideas about possible solutions  
   e) Develop possible design solutions  
7. Continue to develop final design alternatives  
8. Write midterm paper  
9. Create power point presentation  
10. Discussed possible final design alternative  
11. Finalize design  
12. Further develop and test prototype  
13. Present final design
**Summary of Team Accomplishments:**
We spent most of the week working on the paper after our presentation on Friday. We also got our tactile sensors ordered and obtained the jewelry wire for the cap removal sensor. The plan for Friday is to order the gyroscope sensor and contact Dan Yee about working in the lab to test our stuff.

**Project Schedule:**
- **9/2** Form team, contact client, assign team roles, set up client meeting
- **9/9** Literature search, create problem statement, begin PDS
- **9/16** PDS, brainstorming, begin developing designs
- **9/23** Design research
- **9/30** Design Research
- **10/7** Work on mid-semester presentation paper and presentation (oral and power point)
- **10/14** Mid-semester presentation
- **10/21** Work on final design (i.e. develop a prototype, testing, etc)
- **10/28** Continue working on final design
- **11/4** Work on design
- **11/11** Work on design
- **11/18** Continue working on design, start working on presentation
- **11/25** No Class (Thanksgiving)
- **12/2** Prepare final presentation and paper
- **12/9** Final poster presentation
- **12/16** Hand in report and notebook
- **12/23** Last day of finals

**Activities:**

**Arinne:**
- Writing Paper (7 hrs)
- Editing Paper (3 hrs)
- Phone calls (ordering) (1 hr)
- Misc (2 hrs)

*Total: 13 hrs*

**Anita:**
- Writing Paper (6 hrs)
- Editing Paper (2 hrs)
- Misc (2 hrs)

*Total: 10 hrs*

**Becky:**
- Writing Paper (6 hrs)
- Editing Paper (2 hrs)
- Misc (2 hrs)

*Total: 10 hrs*

**Michael:**
- Writing Paper (2 hrs)
- Editing Paper (.5 hrs)
Misc (2 hrs)
Total: 4.5 hrs

Team Total Hours for this week: 37.5 hrs
