Auto-Suture Nasal Device

Team Members: Tim Pearce – Team Leader
Kuya Takami – Communications
Mollie Lange – BSAC
Peter Ma – BWIG

Client:
Dr. Benjamin Marcus
Dept. of Otolaryngology UW Medical School
Phone: 265-5470
email: marcus@surgery.wisc.edu

Advisor:
Kristyn S. Masters, Ph.D.
Assistant Professor
Dept. of Biomedical Engineering University of Wisconsin
Phone: 265-4052
email: kmasters@wisc.edu

Problem Statement
Our goal is to develop a device which will automatically deploy a suture to a specific region of the nose which is commonly detached in two common nasal surgeries, rhinoplasty and septoplasty. The current procedure is tedious and time consuming for the performing surgeon, often taking 15 minutes or more. Our client would like to develop a device which will automatically suture the desired location with minimal surgeon involvement. This will cut down on surgeon error, and make a more effective suture.

Last Week’s Goals
• Work on final paper

Accomplishments
• Finished final paper

This Week’s Goals
- Relax for finals!!!

**Difficulties**
- None

**Activities/Accomplishments**
