

# Neurochemical Sampling Device

**Week 1** – September 5 to September 11, 2008

**Team Members:** Paul Schildgen – Team Leader  
Lauren Eichaker – BSAC  
Cole Drifka – BWIG  
Angwei Law – Communicator

**Client:** Ei Terasawa  
Department of Pediatrics, Primate Center Building  
Email: terasawa@primate.wisc.edu Phone: (608) 263-3579

**Advisor:** John G. Webster  
Professor Emeritus, Dept. of Biomedical Engineering  
Email: webster@engr.wisc.edu Phone: (608)-263-1574

## Summary of Accomplishment:

We decided on team roles and met with our client to discuss the project. She explained to us how her research equipment works and what she would like to see done to improve her ability to carry out her experiments. She also gave us some parts of the equipment and material from last semester so we could get a better idea of what needs to be done. We will be meeting with our client again next week.

## Statement of Team Goals:

Over the next week we hope to gain knowledge of relevant background information, establish our problem statement, come up with a project timeline, and work on our product design specifications.

## Difficulties:

We haven't had any difficulties at this point.

## Activities:

Paul Schildgen	Set up and worked on progress report and notebook. Watched "Working with Clients" video.	1.5 hours
Angwei Law	Communications, watched design videos, reviewed past semester's work	1.5 hours
Lauren Eichaker	Watched the online lecture, reviewed the posted design specifications/product design process notes and taped copies of them into my notebook for review	1 hour
Cole Drifka	Notebook and watching/ reviewing some of the online stuff	45 min
Team	Met for in class to decide team roles, got in contact with our client, and began understanding our project. Also, met with our client on September 12th to learn about where our client would like to go with this project.	3 hours

## Expenses:

There are no expenses so far.
