

Title: Growth plate measurement device

Names: Andrea Schnelle, Barry Bass, Adam Graf, Rafael Connemara

Date: 11/27/02-12/03/02

Problem Statement: Develop a more accurate and physiologically sound method to measure the longitudinal lengthening of the growth plate in a lamb.

Restatement of Team Goals (last weeks goals): : The group has discussed the elements of the final paper and we plan to re-group early the following week to discuss what we have accomplished and what still needs to be done.

Accomplishments: We have decided to write our report as if we were submitting it to the Journal of Pediatric Orthopedics. The following link gives information about the format and necessary inclusions that the paper should possess. <http://www.pedorthopaedics.com/>

Project Schedule. We are planning a meeting either tomorrow or Thursday to discuss how the elements of the paper will work in the format indicated by the web site. Although the long weekend set us back, we are prepared to buckle down this week and get a lot accomplished.

Difficulties:

Activities:

Barry -

Rafael -

Adam -

Andrea - Research on possible journals to submit the paper to, 20 minutes on weekly PR.
